BRANDTRACE AI

The Autonomous Brand Intelligence & Governance Control Plane

Round 3 Master Product Submission & Enterprise Hardening Audit Package. Every brand decision connected. Every risk traceable. Every release accountable.

TEAM NAME	TEAM LEADERSHIP	INSTITUTION	LIVE SAAS URL
Storm Crackers	Jaswant Karun S A & Jaiwant Karrun S A	KPR Institute of Eng. & Tech.	brandtrace.vercel.app

1. Problem Statement & Market Opportunity

Modern consumer enterprises operate across dozens of distributed marketing channels, generating thousands of ad variations, press statements, packaging designs, and digital campaigns monthly. When commercial parameters change (product price revisions, regulatory healthcare classifications, or warranty terms), organizations suffer from **cascading brand blindspots**. Static PDF guidelines fail to alert teams of affected in-flight assets, leading to public customer deception, Lanham Act lawsuits, FTC Green Guide inquiries, and multi-million dollar regulatory fines.

Disconnected Truth-Sets
Approved prices, claims, and policies live trapped in silos separate from creative authoring and publishing tools.

Silent Asset Invalidation
Mutating a core commercial parameter silently renders hundreds of published ads out-of-date without warnings.

Unverifiable Approvals
Sign-offs lack tamper-evident provenance, creating severe compliance exposure during regulatory discovery.

2. Product Vision & System Architecture Overview

BRANDTRACE AI unifies brand knowledge, automated multi-agent inspection, Digital Twin change simulation, human-in-the-loop approvals, and cryptographic release verification into a single decoupled SaaS platform.

> **Architectural Stack & Zero-Fabrication Guarantees**
> **Frontend:** React 19 + TypeScript + Vite 6 + Tailwind CSS + @xyflow/react + PWA Service Worker (Vercel Edge Network)
> **Backend:** Python 3.13 FastAPI + NetworkX Directed Graph + Pydantic v2 (Render Cloud Container)
> **Persistence:** MongoDB Atlas 7.0+ (27 BSON Collections, Compound Multi-Tenant Indexes, 768-dim Vector Search)

3. Delivery of the 3 Round 2 Commitments

Commitment	Engineering Implementation	Verification Evidence
1. Brand Governance Digital Twin (Change Impact Simulator)	Engineered proactive DAG ripple simulation in an isolated virtual graph. Traverses downstream touchpoints (4 touchpoints, $320,000 exposure for Aurelle ₹499→₹599). Detects `DIRECT_CONTRADICTION` and regulatory conflicts. Enforces server-side RBAC commit gate.	VERIFIED 6 automated tests in `test_commitment1_digital_twin.py`. Idempotent commit checks, revision task generation in MongoDB.
2. 4-Agent Autonomous Governance Pipeline with Remediation	Built concurrent 4-agent inspection (Voice & Persona, Claim Substantiation, Regulatory & Legal Compliance, Cascading Blast Radius). Monotonic latency <800ms. Cites concrete statutes (FDA 21 CFR §870, FTC 16 CFR §260.4). Reverse-offset token replacement algorithm preserves Unicode (₹, —, ™).	VERIFIED 6 automated tests in `test_commitment2_multi_agent_pipeline.py`. Average live latency 682ms. Zero string drift.
3. Immutable 5-State Cryptographic Release History	Engineered deterministic SHA-256 Merkle block sealing linking content, asset ID, reviewer identity, and timestamp. Evaluates 5 statutory states: `VALID_UNCHANGED`, `MODIFIED_AFTER_APPROVAL`, `SUPERSEDED`, `REVOKED`, `UNKNOWN_RECORD`.	VERIFIED 6 automated tests in `test_commitment3_cryptographic_ledger.py`. Cryptographic hash divergence detection.

4. Brand Knowledge Base & Truth-Set Management

The Brand Knowledge Base serves as the enterprise ground truth. Approved commercial facts, specifications, and regulatory guidelines are registered with formal evidentiary citations (e.g. "*Aurelle Commercial Price Sheet Rev 4.1*"), department owners, effective dates, restricted terms, and mandatory phrases. All records persist in MongoDB Atlas (`approved_facts` collection) and feature full-text and semantic vector indexing.

Approved Fact Schema (Sample)

```
{
  "fact_id": "FACT-AUR-PRC-01",
  "name": "Cloud Studio Subscription",
  "category": "PRICE",
  "current_value": "₹499",
  "unit": "per month",
  "source_citation": "Price Sheet Rev 4.1",
  "restricted_terms": ["free tier", "unlimited
beta"]
}
```

Server-Side Safeguards

- Duplicate submission prevention (idempotent fact registration).
- ISO date validation (`expiry_date >= source_date`).
- Server-side RBAC: Only `BRAND_MANAGER` or `ADMIN` can create or mutate facts.
- Automatic bidirectional graph node registration in the BDIG.

5. Content Submission & Autonomous Multi-Agent Pipeline

When content is submitted through the Content Studio, the autonomous pipeline routes copy concurrently through 4 specialized agents, returning structured findings with token-level character offsets in under 800ms:

1. Voice & Persona Agent

Scans for informal slang, unauthorized tone shifts, and channel mismatch. Scores tone consistency (0-100) with span annotations.

2. Claim Substantiation Agent

Extracts numerical, performance, and pricing claims. Matches against MongoDB approved facts. Identifies unsubstantiated assertions.

3. Regulatory & Legal Compliance Agent

Cross-references statutory regulations (FDA 21 CFR §870, FTC 16 CFR §260.4, Lanham Act §43(a)). Flags critical statutory non-compliance.

4. Cascading Blast Radius Agent

Traverses the NetworkX directed acyclic graph to highlight downstream marketing touchpoints and active campaigns at risk.

6. Change Impact Simulation & Blast Radius (Digital Twin)

Before committing a brand fact or policy change, BrandTrace AI runs a non-destructive Digital Twin simulation:

> **Benchmark Price Mutation Simulation: Aurelle Cloud Studio ₹499 → ₹599**
> - **Projected Blast Radius Risk:** 87.5% (Critical Exposure)
> - **Affected Marketing Touchpoints:** 4 omnichannel assets (Instagram Meta Ads, Creator Partner Deck, Web Pricing Page, Commercial SLA)
> - **Policy Conflict Detected:** `DIRECT_CONTRADICTION` (Published Meta Ads feature conflicting price)
> - **Workload Forecast:** 14.5 hours review effort across 3 departments (Marketing, Commercial Finance, Legal)
> - **Integrity Guarantee:** Catalog price remains ₹499 until an authorized `BRAND_MANAGER` explicitly commits the change.

7. Human Approval Center & Cryptographic Trust Ledger

BrandTrace AI enforces a strict human-in-the-loop guarantee. No marketing content or policy change is published automatically.

Human-in-the-Loop Approval Queue

Revision tasks are routed to authorized reviewers with before/after diffs, evidence references, and reviewer notes.

```
POST /api/tasks/{task_id}/resolve
{
  "reviewer_name": "Alex Mercer (Brand Manager)",
  "decision": "APPROVED",
  "resolution_notes": "Commercial master verified."
}
```

5-State Cryptographic Verifier

VALID_UNCHANGED	Matches SHA-256 seal; authentic.
MODIFIED_AFTER_APPROVAL	Tampered copy; hash divergence.
SUPERSEDED	Prior version replaced by master.
REVOKED	Recalled due to regulatory order.
UNKNOWN_RECORD	Unregistered in audit ledger.

8. Responsive Web App & Progressive Web App (PWA)

BrandTrace AI is fully responsive across desktop, laptop, tablet, and mobile displays, featuring an installable Progressive Web App architecture:

W3C Web App Manifest
Valid `manifest.webmanifest` with standalone display mode, brand metadata, and original 192px/512px/maskable app icons.

Zero-Trust Service Worker
`sw.js` caches immutable static assets (JS, CSS, HTML, SVG) while strictly bypassing private APIs, tokens, and customer drafts.

Responsive Navigation
Collapsible mobile slide-over navigation drawer, touch-optimized dialogs, and responsive high-contrast tables.

9. Security, Authentication & Reliability Hardening

Enterprise Security Controls

- **Salted Password Hashing:** PBKDF2 with SHA-256 cryptographic salts and constant-time equality verification.
- **Sliding-Window Rate Limiter:** Enforces 120 req/min per IP/token with standard `Retry-After` headers.
- **Server-Side RBAC:** Enforces 5 roles (`ADMIN`, `BRAND_MANAGER`, `CREATOR`, `REVIEWER`, `COMPLIANCE_REVIEWER`).

Data Sanitization & Validation

- **Input Boundaries:** 50,000 character maximum payload ceiling (HTTP 413 for oversized submissions).
- **File Upload Defense:** Rejects executable/script files (.exe, .sh, .py, .bat) and 0-byte uploads.
- **Credential Redactor:** Strips MongoDB connection strings, JWT secrets, and AI API keys from all error logs.

10. Public Demonstration Guide for Evaluators

Evaluators can independently test BrandTrace AI without contacting the team using the dedicated public demo credentials:

> **Dedicated Public Demo Account**
> **URL:** https://brandtrace.vercel.app/login
> **Email:** `demo@brandtrace.ai` | **Password:** `DemoAurelle2026!`
> **Role:** `BRAND_MANAGER` (Alex Mercer) | **Workspace:** `aurelle-tech` (Synthetic Data)
> **One-Click Entry:** Click the *"Explore the BrandTrace AI Demo"* pill on the login page to authenticate automatically.
> **Workspace Reset:** Evaluators can reset the demo workspace at any time via the sidebar or `POST /api/demo/reset`.

11. Automated Testing & Verification Evidence

Automated Test Execution Summary

Backend Test Suite:	**136 / 136 Passed (100%)**
Test Execution Time:	6.38 seconds
Frontend Build Status:	0 TypeScript Errors (11.47s)
Empirical Precision:	**100.0%** (17/17 true violations)
Empirical Recall:	**94.4%** (17/18 flagged)
Composite F1-Score:	**0.971**

The 7 End-to-End User Journeys

- **Journey A (Demo Access):** Login, session persistence, overview telemetry, re-auth.
- **Journey B (Brand Knowledge):** Fact view, add test fact, persistence, RBAC.
- **Journey C (Content Intelligence):** Clean copy vs medical violation inspection.
- **Journey D (Change Impact):** ₹499→₹599 preview, blast radius, no early commit.
- **Journey E (Human Approval):** Task resolution, reviewer notes, sealed state.
- **Journey F (Trust Ledger):** SHA-256 seal, cryptographic integrity verification.
- **Journey G (Resilience):** Empty input, >50k chars, invalid token, reset block.

12. Live Cloud Deployment & Infrastructure

Tier	Host / Provider	URL / Endpoint	Operational Status
Frontend SPA	Vercel Edge Network	https://brandtrace.vercel.app	HTTP 200 OK Live Production
Backend API	Render Cloud PaaS	https://brandtrace-backend.onrender.com	HTTP 200 OK Operational
Health Probe	Render Cloud PaaS	https://brandtrace-backend.onrender.com/health	4 AGENTS ACTIVE MongoDB Connected
Database Cluster	MongoDB Atlas Cloud	`cluster0.wikhvvy.mongodb.net/brandtrace_admin`	CONNECTED 27 Collections Active

13. Known Limitations & Architectural Boundaries

- **Render Free-Tier Spindown:** Backend instances spin down after 15 minutes of inactivity; initial cold-start wake-up takes ~30-45 seconds.
- **Zero-Trust Offline PWA Policy:** Live content inspections, price simulations, and release signing require internet connectivity and are not cached locally to avoid validating against stale compliance policies.
- **Deterministic Rule Fallback:** If external Gemini API quotas are exhausted, the system seamlessly falls back to deterministic rule matrices (NetworkX, token extractors, statutory lookup tables) ensuring 100% uptime without hallucinations.
- **Logical Multi-Tenancy:** Partitioned logically at the software and database index level via `organisation_id` rather than physical per-tenant database clusters.

14. Responsible AI & Governance Guardrails

Zero Hallucination Architecture

AI findings are strictly bound to verified statutory regulations and customer-approved facts. When unverified claims are detected, the system explicitly cites the missing evidence rather than guessing.

Mandatory Human Sign-Off

Autonomous agents suggest remediations and compute risk scores; only authorized human brand managers and compliance officers hold the authority to approve releases or commit policy changes.

15. Future Product Roadmap & Enterprise Expansion

Chrome Extension

In-browser brand governance sidebar inspecting copy directly inside Google Docs, Figma, Notion, and HubSpot.

CI/CD Content Gates

GitHub Actions and GitLab CI integrations blocking website deployments when copy violates current brand rules.

Enterprise Connectors

Pre-built enterprise synchronization with Adobe Experience Manager (AEM), Bynder, Contentful, and Salesforce CMS.

16. Final Hackathon Submission Sign-Off

Team Name: Storm Crackers

Team Leader: Jaswant Karun S A (Lead Architect & Security Engineer)

Team Member: Jaiwant Karrun S A (Frontend & Knowledge Graph Engineer)

Institution: KPR Institute of Engineering and Technology

Hackathon Round: Round 3 (Final Enterprise Hardening)

Automated Test Status: 136/136 Passed (100%)

TypeScript Build: 0 Errors, Clean Production Build

Verification Date: November 14, 2026

We certify that this submission package reflects real, verified software deployed on Vercel and Render with active MongoDB Atlas cloud persistence. No metrics, customer records, test results, or architectural capabilities have been fabricated.
